HEADLINE: PRIME THERAPEUTICS; Pharmacy benefit company expands PrimeRxSpecialty program, enhances Web site

BODY:

Prime Therapeutics LLC announced that it has selected McKesson Corporation to facilitate the procurement and dispensing of specialty injectable and infusion therapies for its PrimeRxSpecialty program.

Prime and McKesson Specialty, a subsidiary of McKesson Corporation, will work together to improve patient care and control specialty drug costs for Prime's health plan members.

By 2005, specialty medications are estimated to represent more than 20% of all prescription drug spending. With nearly 200 drugs in the biotech pipeline, it is becoming increasingly important to effectively manage specialty drugs.

The agreement between Prime and McKesson offers Prime's clients and their members broad access to high-cost injectable and infusion therapies used to treat patients with chronic, complex or genetic conditions. Prime's clients will benefit from a coordinated approach to specialty pharmacy, offering greater and more consistent discounts, as well as enhanced patient care and customer service.

In other company news, it has announced the expansion of its business in Omaha with the addition of approximately 80 new employees through December 2004 and an expected additional 75 new employees through 2006. The company's expansion is the result of new contracts with Blue Cross and Blue Shield plans. Currently, Prime provides pharmacy benefit management services to nine Blue Cross and Blue Shield plans, including Blue Cross and Blue Shield of Nebraska.

The majority of new positions are professional roles in pharmacy benefit administration and customer service. In addition to competitive salaries, the jobs offer a wide range of benefits, including cafeteria-style.
